

Sulphur cinquefoil

Potentilla recta

Description

Used for its medicinal properties. Also fruit of plant is edible.

Habit

Erect; perennial; 16-32 in tall; hairy forb; unbranched to the inflorescence; woody taproot with short branch roots, no rhizomes.

Leaves

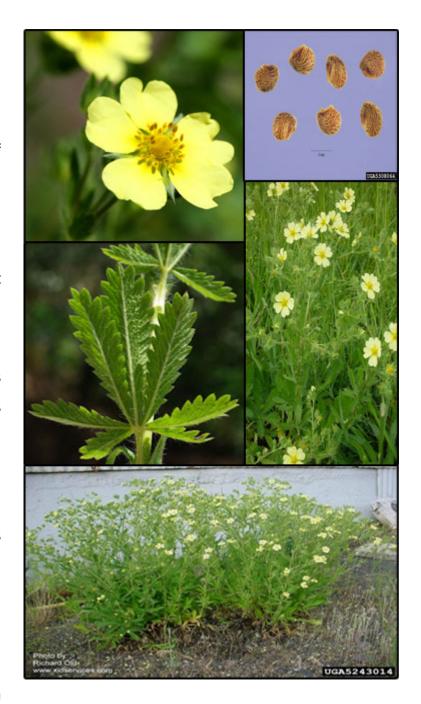

Palmately-divided, deeply-toothed, lower leaves long-stalked with 5-7 leaflets; upper leaves smaller, shorter stalked and with 3 leaflets.

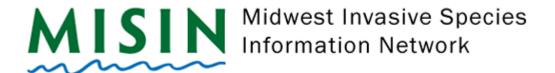

Stems

Erect; upright; slender; 20-80 cm (8-30 in) tall; upper portion may be branched; long hairs perpendicular to leafstalk and stem.

Flowers

Pale yellow in color, 5-parted, 3/4 in wide, inflorescence of many flowers in flattened, branched cluster (cyme); blooms June through

August.

Fruits and Seeds

Achene strongly veined, brownish-purple, 1 mm long.

Habitat

Native to Eurasia. Found in dry, disturbed sites.

Reproduction

By seed and vegetatively by sprouting from a caudex.

Similar

Foliage has some resemblance to Marijuana (Cannabis sativa) but marijuana is taller with different flowers. Other species of Cinquefoil (Potentilla spp.) are difficult to distinguish.

Monitoring and Rapid Response

Hand-pulling or dig up, or by spot spraying of herbicides. The root crown (upper portion of the root system) must be removed or killed so that plants cannot resprout.
