

Swamp stonecrop

Crassula helmsii

Description

Available in some areas as an oxygenating plant for water gardens and aquaria.

Habit

Aquatic or semi-terrestrial evergreen; succulent perennial that may form a carpet at waters edge, or grow completely submerged in deeper water.

Leaves

Opposite and narrow, 4-24 mm (0.16-0.94 in) long.

Stems

Elongated; stiff.

Flowers

Tiny, white in color, 4 petals.

Fruits and Seeds

Fruits are follicles containing 2-5 elliptical and smooth seeds about 0.5 millimeters long.

Habitat

Native to Australia and New Zealand. Found in water bodies with still or slow-moving water; tolerates

alkaline, acidic, or slightly salty water.

Reproduction

May be spread by tiny stem fragments; seeds are not known to be produced.

Similar

Water pygmyweed (*Crassula aquatica*).

Monitoring and Rapid Response

Hand-pulling, grass carp, Diquat alginate has been the most effective herbicide.
